

**ANSWER SCHEME
MODUL 1 PAPER 2**

No			Sample answer	Mark
1	(a)	(i)	The number of protons in the nucleus of an atom.	1
		(ii)	17	1
	(b)	(i)	2.8.1 // 2, 8, 1	1
		(ii)	Reacts with water to produce hydrogen and metal hydroxide// Reacts with oxygen to form metal oxide.// Reacts with chlorine gas to produce metal chloride.	1
	(c)		Q and R because they have the same proton number but different nucleon number// same number of proton but different number of neutrons	1 1
	(d)	(i)	Correct no of shells Correct e arrangement 	1 1
		(ii)	To fill advertising light bulb	1
			Total	9 m

2	(a)		Element D Atom D has achieved octet electron arrangement / 8 valence electrons // atom D does not receive, release or share electrons with other atom	1 1
	(b)		A	1
	(c)		G	1
	(d)		D, B, A, G, E	1
	(e)	(i)	Use a small piece of A // use a filter paper to dry A //The gas jar spoon is quickly placed into a gas jar	1
		(ii)	$4 A + O_2 \rightarrow 2 A_2O$	1
		(iii)	4 moles of A : 2 moles of R_2O 1 moles of A : 0.5 moles of R_2O Mass of $R_2O = 0.5 \times [2(7) + 16]$ = 15 g [r: answer without unit]	1 1

			Total	9 m
--	--	--	--------------	------------

3	(a)		Boron oxide	1
	(b)		In pure copper, the atoms can slide easily. <i>Dalam kuprum tulen, atom-atom boleh menggelungsur dengan mudah.</i>	1
			In bronze/alloy, tin atoms/foreign atoms disrupt the orderly arrangement of copper atoms//layers of atoms cannot slide easily <i>Dalam aloi/bronze atom asing atau atom timah mengganggu susunan teratur atom kuprum.//Lapisan atom tidak dapat bergelungsur dengan mudah</i>	1
	(c)	(i)	$\begin{array}{cc} \text{H} & \text{Cl} \\ & \\ \text{C} = & \text{C} \\ & \\ \text{H} & \text{H} \end{array}$	1
		(ii)	Do not rust//oxidised	1
	(d)		Reinforced concrete <i>Konkrit yg diperkukuhkan</i>	1
	(e)	(i)	$2\text{NH}_3 + \text{H}_2\text{SO}_4 \rightarrow (\text{NH}_4)_2\text{SO}_4$	1
			Correct formulae balance	1
		(ii)	urea	1
			% of N in $\text{CO}(\text{NH}_2)_2 = \frac{14 \times 2}{(12+16+(14 \times 2)+4)} \times 100$ = 46.67%	1
			% of N in $(\text{NH}_4)_2\text{SO}_4 = \frac{14 \times 2}{(14 \times 2)+6+32+(16 \times 4)}$ = 21.5%	1
			Total	11 m

4	(a)	(i)	Chemical energy to electrical energy	1
		(ii)	Electrical energy to chemical energy	1
	(b)			1
	(c)	(i)	$\text{Zn} + \text{Cu}^{2+} \longrightarrow \text{Zn}^{2+} + \text{Cu}$ <p>Correct ionic formula Balance equation</p>	1 1
	(d)	(i)	become thicker	1
		(ii)	become thinner	1
	(e)	(i)	No change // blue solution remain unchanged	1
		(ii)	The rate of copper ionises at anode is the same as the rate of copper ion discharged at cathode number/concentration of Cu^{2+} ion in the solution remain	1 1
			Total	10 m

5	(a)	(i)	Salts is an ionic compound formed when hydrogen ion in an acid is replaced by metal ion or ammonium ion.	1				
		(ii)	<table border="1" style="width: 100%;"> <tbody> <tr> <td>White solid turns brown when hot and yellow when cold <i>Pepejal putih bertukar perang semasa panas dan kuning semasa sejuk</i></td> <td style="text-align: center;">√</td> </tr> <tr> <td>Black solid turns brown <i>Pepejal hitam bertukar perang</i></td> <td></td> </tr> </tbody> </table>	White solid turns brown when hot and yellow when cold <i>Pepejal putih bertukar perang semasa panas dan kuning semasa sejuk</i>	√	Black solid turns brown <i>Pepejal hitam bertukar perang</i>		1+1
White solid turns brown when hot and yellow when cold <i>Pepejal putih bertukar perang semasa panas dan kuning semasa sejuk</i>	√							
Black solid turns brown <i>Pepejal hitam bertukar perang</i>								

			Lime water remain unchanged <i>Air kapur tidak berubah</i>		
			Lime water turns chalky <i>Air kapur menjadi keruh</i>	√	
	(b)	(i)	$\text{Pb}(\text{NO}_3)_2 + \text{Na}_2\text{CO}_3 \rightarrow \text{Pb CO}_3 + 2\text{NaNO}_3$ Correct formula of reactant and product Correct balancing		1 1
		(ii)	Double decomposition reaction		1
		(iv)	Filter the solution mixture using filter funnel and filter paper Rinse the residue		1 1
	c		1. Add 2 cm³ of KI/Nal solution into the test tube contain 2 cm³ of Pb(NO₃)₂ solution and the test tube is shaken 2. Yellow precipitate formed indicates the presence on Pb²⁺ ion		1 1
				Total	11 m

	(e)	<p>Isomer</p> $ \begin{array}{cccc} \text{H} & \text{H} & \text{H} & \text{H} \\ & & & \\ \text{H}-\text{C} & =\text{C} & -\text{C} & -\text{C}-\text{H} \\ & & & \\ & & \text{H} & \text{H} \end{array} $ $ \begin{array}{cccc} \text{H} & \text{H} & \text{H} & \text{H} \\ & & & \\ \text{H}-\text{C} & -\text{C} & =\text{C} & -\text{C}-\text{H} \\ & & & \\ \text{H} & & & \text{H} \end{array} $ $ \begin{array}{c} \text{H} \\ \\ \text{H}-\text{C}-\text{H} \\ \\ \text{H}-\text{C}=\text{C}-\text{C}-\text{H} \\ \\ \text{H} \end{array} $	<p>1</p> <p>1</p> <p>1</p>
Total			11 m

7		<p>acid P : hydrochloric acid/ sulphuric acid/ nitric acid.</p> <p>Acid P/ hydrochloric acid/ sulphuric acid/ nitric acid is a strong acid// ionize completely in water</p> <p>to produce high concentration of H⁺ ions.</p> <p>It will cause the pH value to be lower (smaller).</p> <p>acid Q : ethanoic acid.</p> <p>Acid Q/ ethanoic acid is a weak acid // Ionise partially in water</p> <p>to produce low concentration of H⁺ ions.</p> <p>Hence, pH value is higher (bigger)</p>	<p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p>
		<p>NH₄OH</p> <p>neutralize the acid secreted by ant</p>	<p>1</p> <p>1</p> <p>1</p>
		<p>$H_2SO_4 + 2NaOH \rightarrow Na_2SO_4 + 2H_2O$</p> <p>Correct formula reactants and products</p> <p>Balance equation</p> <p>Calculation: Mole of H₂SO₄</p> $\frac{MV}{1000} = \frac{0.5 \times 50}{1000}$ <p>= 0.025 mole</p> <p>Ratio 1 mole of H₂SO₄ : 2 mole of NaOH 0.025 : 0.05</p> <p>Correct Molarity of NaOH with unit:</p> $n = \frac{0.05 \times 1000}{25}$ <p>= 2.0 mol dm⁻³</p> <p>[r: answer without unit]</p>	<p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p> <p>1</p>

		mol dm ⁻³ / halved / decrease halved / less halved	1
		hydrochloric acid is monoprotic/monobasic acid.	1
		sulphuric acid is a diprotic acid / dibasic acid	1
		Total	20 m

8	(a)	<p>1. average rate = $\frac{50}{55}$</p> <p>2. = 0.909//0.91 cm³ s⁻¹ [r: answer without unit]</p>	1 1
	(b)	<p>1.y axis labeled energy</p> <p>2.both curve drawn correctly with label</p> <p>3.energy level labeled with reactant and products [a: exo or endo]</p> <p>4.activation energy labeled correctly</p>	1 1 1 1
	(c)	<p>Experiment I and Experiment II</p> <p>1. Rate of reaction of experiment II is higher than experiment I</p> <p>2. Experiment II use higher concentration of hydrogen peroxide</p> <p>3. the number of Hydrogen peroxide molecules/reactant particles per unit volume in experiment II is higher.</p> <p>4. Frequency of collision between Hydrogen peroxide molecules of experiment II become higher</p> <p>5. Frequency of effective collision between Hydrogen peroxide molecules/reactant particles of experiment II become higher</p> <p>Experiment II and Experiment III</p> <p>6. Rate of reaction of experiment III is higher than experiment</p>	1 1 1 1 1

		II	1
		7. Catalyst that is Manganese(IV) oxide present in experiment III	1
		8. Manganese(IV) oxide lower the activation energy of the reaction in experiment III	1
		9. More colliding hydrogen peroxide molecules easily overcome the lower activation energy in experiment III	1
		10. Frequency of effective collision between Hydrogen peroxide molecules of experiment III become higher	1
	(d)	1. number of mole of H ₂ O ₂ = $\frac{0.5 \times 30}{1000}$ // 0.015	1
		2. 2 mole of H ₂ O ₂ produce 1 mole of O ₂	1
		3. number of mole of O ₂ = $\frac{0.015}{2}$ // 0.0075	1
		4. volume of O ₂ = 0.0075 x 24 dm ³ // 0.18 dm ³ // 180 cm ³ [r: answer without unit]	1
		Total	20 m

9	(a)	(i)	Ionic compound: W and X // covalent compound : V and X	1+1
		(ii)	<p><i>Ionic compound</i></p>  <p>1. Correct charge of ion</p> <p>2. correct number of electron in the shell for each ion</p> <p>3. contain nucleus</p> <p>Explanation</p> <p>Ionic compound</p> <ul style="list-style-type: none"> • Electron arrangement of an atom of element W is 2.8.1 • 2 Atom W donates one electron each to achieve the stable electron arrangement which is 2.8 • 2 W ion, W⁺ is formed • Electron arrangement of atom X is 2.6 • Electrons from atom W are transferred to an atom of X • Atom X receives TWO electrons to achieve the stable electron arrangement which is 2.8. • W ion, X²⁻ is formed • The W ion, W⁺ and X ion X²⁻, formed are attracted to one another to form an ionic compound, W₂X • The strong electrostatic forces between the opposite-charged ions is called ionic bond. <p>Any 7 points</p> <p>Any physical state</p>	<p>1</p> <p>1</p> <p>1</p> <p>7 marks</p> <p>1 mark</p>

Covalent bond

- Atom V has **four** valence electrons, with an electron arrangement of **2.4**
- It needs **four** more electrons to achieve the **stable** electron arrangement
- One atom of X contributes 2 electrons for **sharing**
- Atom X has **SIX** valence electrons, with an electron arrangement of **2.6**
- It needs **two** more electrons to achieve the **stable** electron arrangement
- One atom of v share a pair of electrons with **two** atoms of x
- Covalent compound of **VX₂** is formed

7
marks

Any physical state

1 mark

1. correct number of electron for each atom combined
2. contain nucleus
3. correct the position (share the electron + shell)

	b	i	Substance Y is glacial ethanoic acid // gas hydrogen chloride Solvent Z is tetrachloromethane//ethanol//any organic solvent	1 1
		ii	Solution I Substance Y dissolve in water The ions in water dissociate and move freely Solution II Substance Y do not dissolve Exist as neutral covalent molecules	1 1 1 1 Max 5
